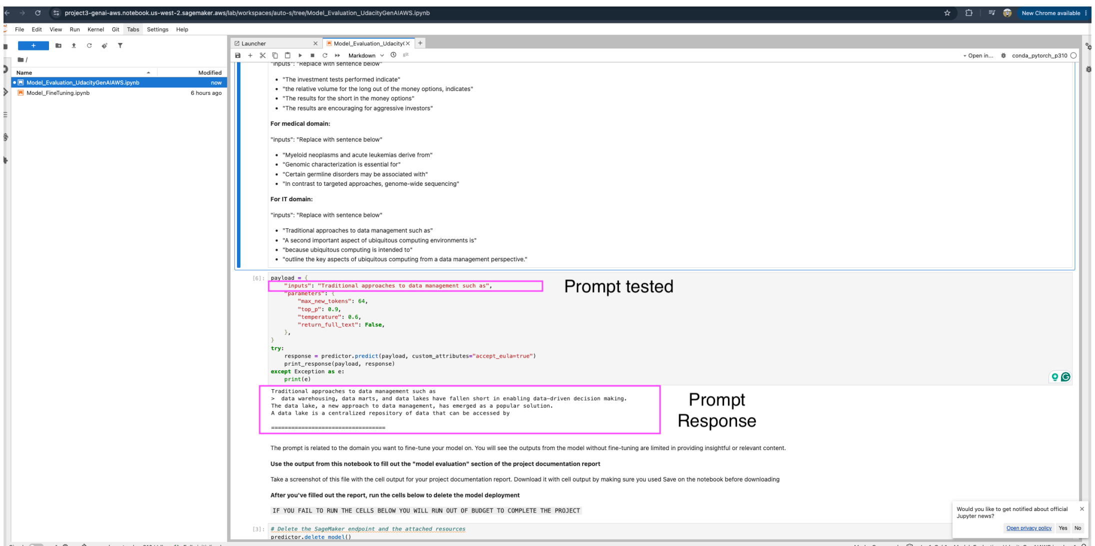
Pre trained LLM

Prompt used:
"inputs": "Traditional approaches to data management such as",
Pre-trained model response summary:
The model generated a general IT/data-management response mentioning data warehousing, data lakes, and data virtualization.



```
Evaluation:
Traditional approaches to data management such as
>  data warehousing, data marts, and data lakes have fallen
short in enabling data-driven decision making.
The data lake, a new approach to data management, has emerged
as a popular solution.
A data lake is a centralized repository of data that can be
accessed by
```

\subsection{Ubiquitous Computing}
Ubiquitous computing is a recent concept that has emerged from the confluence of three major trends: the widespread adoption of wireless communication technology, the miniaturization of computers, and the development of embedded systems
